REVOWRAP 225

-50°C TO 233°C - YIELDING AMAZING PRESSURE CAPABILITIES

» PRODUCT OVERVIEW

Revowrap is an engineered composite solution used to restore damaged critical assets back to the original design specification of the equipment. Each repair is engineered using ASME PCC2 or ISO TS 24817 engineering codes for High risk non-metallic repairs. Carbontech engineers have the technology to perform FEA (Finite Element Analysis) on both the damaged piping systems and the Revowrap composite repair system. Revowrap provides re-enforcement of the piping in both the axial and hoop directions, and delivers uniform loading throughout the repair. The "Revowrap225®" composite systems are engineered to operate in working temperatures from -50°C to 233°C. Our composite systems can be applied by hand lamination or by infusion methods and may be applied to live piping systems without shutting down for the repair. Revowrap may be applied to any pipe size, most substrates and almost any piping configuration including tanks, vessels, flanges, and other compromised structural assets.

CONCLUSION

Revowrap is available in a range of widths and lengths and is designed for variants of pipe diameters and defect ranges. Revowrap may be applied in continuous spiral wraps used for continuous lengths of pipe, circumferential wraps for localised defects and weld defects. Revowrap 225 is the ideal solution for pipes where corrosion, mechanical damage or support abrasion has reduced the remaining wall thickness to below the MAOP. Once applied Revowrap 225 restores the pipe integrity back to the original design specification and also provides excellent corrosion and abrasion protection.
